

# Anti-DDoS Basic

FAQs

# FAQs

## Flow cleaning

The flow cleaning service consists of three units: detecting center, cleaning center, and centralized management center.

The detecting center monitors data traffic flowing into the ECS instance, and identifies abnormal traffic in a timely manner, such as DDoS attack. When an abnormality is detected, the management center guides the cleaning center to clean suspicious traffic based on the traffic diversion policy. Malicious traffic is removed, while legitimate traffic is returned to the original instance. This ensures only legitimate traffic can be forwarded to the target system.

## Cancel flow cleaning

1. Log on to the Alibaba Cloud console.
2. Click **Anti-DDoS Basic** under **Security**.
3. Find your server that is in the flow cleaning status, click **Cancel Cleaning**.

**Note** One account can manually cancel flow cleaning for **three times** in one day.

Anti-DDoS Basic service allows you to set the alarm modes (alarm through text message or e-mail) and the alarm time periods (alarm only between 10:00 - 20:00, or 24/7 alarm).

**Note** The alarm time period settings only apply to text message alarms. Therefore, if you have set "Alarm only between 10:00 - 20:00", e-mail alarms will still be sent outside of this time period, but text message alarms will not be sent.

1. Log on to Alibaba Cloud Security console.
2. Go to **Anti-DDoS Basic**, click **Alarm settings**.

3. In the **Alarm settings** dialog box, configure the settings based on your needs.

**Tip** For message receiver settings, see Alibaba Cloud Security message receiver settings.

Log on to Message Center console.

Click **Message Settings** and find “Security notice” .

Message Center	Product overdue payment, suspension, and imminent release notifications ⓘ	Account Contact	Modify	✓
Internal Messages	Product release notifications ⓘ	Account Contact	Modify	✓
All Messages	Product renewal or bill settlement notifications ⓘ	Account Contact	Modify	✓
Unread Messages	Product or system upgrade and product configuration change notifications ⓘ	Account Contact	Modify	✓
Read Messages	New product function launch and function removal notifications ⓘ	Account Contact	Modify	✓
Message Settings	Security notice ⓘ	Account Contact	Modify	✓

Click **Modify** and select the message receiver.

You can also click **Add Receiver** to add a message receiver.
