## Price description

## Price Description

**Note:** If your cluster is large, submit a ticket to Alibaba Cloud to request a discount.

The cost of E-MapReduce products includes the following components:

### Cost of ECS products

When purchasing E-MapReduce clusters, Alibaba Cloud ECS is included, so you do not need to prepare ECS in advance. If you are entitled to a discount for ECS, the discount for ECS is also applied to your purchase of E-MapReduce.

### Cost of E-MapReduce products

E-MapReduce provides multi-dimensional management services of clusters, including display and control of pages, API and SDK support, monitoring alarm, operation and maintenance tools, automatic server-side back-end operation and maintenance, and other services. For more information, see [E-MapReduce Product Price Reference](#).

### Cost for external network traffic of the Master nodes

In the created cluster, 8 Mbps public network bandwidth is opened for the Master nodes (for HA cluster, each of the two Master nodes has 8 Mbps of bandwidth). The traffic is Pay-As-You-Go and not included in the cost of the clusters. You are charged outflow traffic on an hourly basis, while the inflow traffic is free of charge. For example, if you use 10 GB of outbound public traffic in an hour, the charge is 10 GB \* price per 1 G (dollar/h). Traffic fees across different regions may vary.

# Renewal

# Renewal

Only subscription clusters need to be renewed, and Pay-As-You-Go clusters are subject to real-time settlement.

To renew a cluster, see [Renew Cluster](#).

# Expiration and overdue payment

# Expiration and overdue payment

# Expiration description

**Note:** Expiration does not apply to Pay-As-You-Go clusters.

If any subscription clusters you have purchased expire, the E-MapReduce console displays a prompt notifying you that the E-MapReduce service of the cluster has expired. When the E-MapReduce service expires, you are unable to implement any operations to the cluster from the console or call the API, and the automatic operation and maintenance (monitoring, alarm, and other related tasks) are also stopped.

If any ECS instances in the cluster expire, a notification of their expiration is displayed. Expired ECS instances in the cluster will run for extra 15 days. After 15 days, if your subscription is not renewed, the expired ECS instances will stop, and data will be retained for an additional 15 days. If your subscription is not renewed at the end of 30 days, the instances are released and data is permanently deleted.

If you want to continue using the E-MapReduce service and the ECS instances, you must renew your subscription. The E-MapReduce service and the ECS instances can be renewed simultaneously through the E-MapReduce Product console. After renewal, both data and services are restored automatically.

If you want to release a cluster, you can wait for the cluster to stop, and the ECS instances to be released automatically, without the need for renewal.

## Overdue payment description

**Note:** Overdue payment does not apply to subscription clusters.

When any Pay-As-You-Go cluster you purchased is overdue for payment, the E-MapReduce service will be stopped. The ECS instances in the cluster will continue to run for 15 days, after which the ECS instances stop running. Data is retained for extra 15 days, after which the instances are released and data is removed permanently.

## Others

Different clusters do not affect one another. For example, if you have a subscription cluster and a Pay-As-You-Go cluster, if the latter is in the overdue payment state, the former works normally without being affected.
